

MRA Sentinel: Regulatory Remediation & Early Warning Proof of Concept (PoC)

Author: Gram99

**Proactive Regulatory Tracking*

The "MRA Sentinel" is a centralized dashboard designed to migrate financial institutions from reactive, fragmented spreadsheet management to a **proactive regulatory defense**. By leveraging Natural Language Processing (NLP) and time-decay logic, the Sentinel ensures that Matters Requiring Attention (MRAs) are remediated well before they escalate into MRIAs or Enforcement Actions.

The Business Case (ROI)

The Problem

- **Fragility:** MRAs managed via spreadsheets lead to "lingering status" and missed deadlines.
- **Escalation Risk:** Failure to address MRAs timely is the primary trigger for Formal Enforcement Actions and Rating downgrades (CAMELS/LFI).
- **Information Asymmetry:** Executives lack a real-time "heatmap" of regulatory risk across business lines.

The Sentinel Solution

- **Automated Ingestion:** Reduces manual entry errors by auto-mapping findings from OCC/FRB exam letters.
- **75% Early Warning System (EWS):** Triggers high-risk flags when 75% of a timeline has elapsed without status changes.
- **Audit-Ready Accountability:** Maintains a tamper-evident Audit Trail of every status change, specifically flagging "Post-Deadline" updates for internal auditors and examiners.

- **Strategic Oversight:** Heatmaps identify thematic concentrations (e.g., Cyber vs. AML) and resource bottlenecks.

Technical Acumen

- **Frontend:** [Streamlit](#) for an interactive, web-based Executive Dashboard.
- **NLP/Extraction:** [PyMuPDF](#) for document parsing and Regex-based thematic mapping.
- **Visuals:** [Altair](#) for resilient, declarative Gantt roadmaps and risk heatmaps.
- **Reporting:** [ReportLab](#) for automated generation of Executive PDF summaries.

Governance, Security & Data Privacy

Because this tool handles sensitive **Confidential Supervisory Information (CSI)**, the following protocols are recommended for production deployment:

- **Data Residency:** This PoC processes files in-memory. Production must be integrated with the bank's **Enterprise Data Lake** or a **Private Cloud** instance (AWS/Azure) that meets SOC2 standards.
- **Access Control (RBAC):** Implementation requires integration with **Single Sign-On (SSO/Active Directory)** to ensure only authorized Risk and Compliance personnel can view findings.
- **CSI Compliance:** This tool should be hosted on **internal, non-public servers**. Users must never upload live regulatory documents to public cloud instances.
- **Audit Persistence:** Production versions should write logs to a **write-once-read-many (WORM)** database to satisfy regulatory requirements for data integrity.

Deployment & Installation

1. Clone the Repository:

```
git clone https://github.com
```

2. Install Dependencies:

```
pip install -r requirements.txt
```

3. Run the Command Center:

```
streamlit run app.py
```

Audit Trail & Governance

The Sentinel implements a strict governance layer:

- **Stale Warnings:** Items with no activity for 30+ days are visually "iced" (🧊) to prompt immediate review.
- **Chronology Guard:** Prevents date inversions from corrupting roadmap visualizations.
- **Audit Context:** Automatically calculates "Days Overdue" at the moment of status transition.

Disclaimer: This tool is a Proof of Concept (PoC) only and should not be integrated with your institution's internal single-sign-on (SSO) and secure database protocols for production use.
