

Law Firm Reputation Auditor (PoC)

Author: gram99

Target Stakeholders: Public Relations & Marketing, 1st Line Recovery Operations, 2nd Line Risk Strategy, Regulatory Governance

Project Overview: This Proof of Concept (PoC) provides managers with a streamlined, automated dashboard to monitor the reputational risk of their legal vendor panels. By analyzing public sentiment and industry-specific red flags, this tool identifies which law firms protect the company's brand and those that may pose a contractual or reputational threat.

Key Features

- **Automated Risk Tiering:** Instantly categorizes law firms into three actionable buckets:
 -  **Low Risk:** High professional standards; candidates for volume expansion.
 -  **Caution:** Mixed reviews; recommended for increased oversight/monitoring.
 -  **High Risk:** Significant consumer complaints; candidates for audit or termination.
- **Quantitative Scoring:** Assigns a Sentiment Risk Score (-1.0 to 1.0) to every firm for objective comparison across the panel.
- **Executive Dashboard:** High-level visual breakdown of the panel's "Risk Mix" via interactive Plotly charts.
- **Corporate-Safe Architecture:** Designed to run reliably behind corporate VPNs and firewalls without external API dependencies.
- **Standardized Workflow:** Includes a downloadable CSV template to ensure seamless data ingestion and user adoption.

Technical Stack

- **Language:** Python 3.x
- **Interface:** Streamlit

- **Analysis Engine:** VADER Sentiment Analysis (Natural Language Processing - NLP)
- **Visualization:** Plotly Express
- **Data Handling:** Pandas

How to Use

1. **Download Template:** Click the "Download CSV Template" button in the sidebar.
2. **Input Data:** Fill in your vendor names, cities, and states into the template.
3. **Upload & Audit:** Upload the completed file and click "Launch Professional Audit."
4. **Review & Export:** Analyze the dashboard and download the full "Compliance Audit Report" for internal records.

Pre-Populated Upload File:

If you do not have a list of firms to populate the template, a pre-populated upload file that can be used to demonstrate the data upload function may be found here:

<https://github.com/gram99/reputational-webscrapper-poc/blob/main/WebScrapeTest.csv>

To use the pre-populated file:

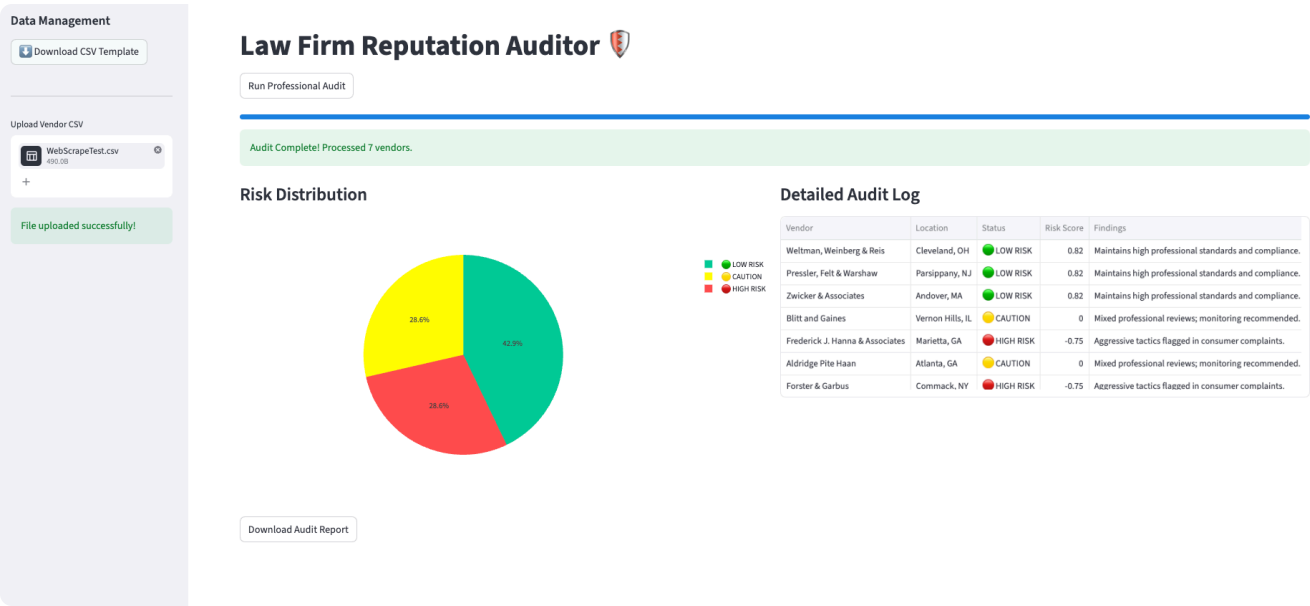

- Click the link shown above.
- When the page returns, click the download button (icon with the down pointing arrow located in the upper right side of the screen).
- After clicking the download icon, the file should be automatically saved to the "downloads" folder on your computer.
- If it is not, you may need to specify your downloads folder or another location such as your desktop so the file is easily found.
- After you have downloaded the pre-populated file click the "Upload" button and select the file from the download location.

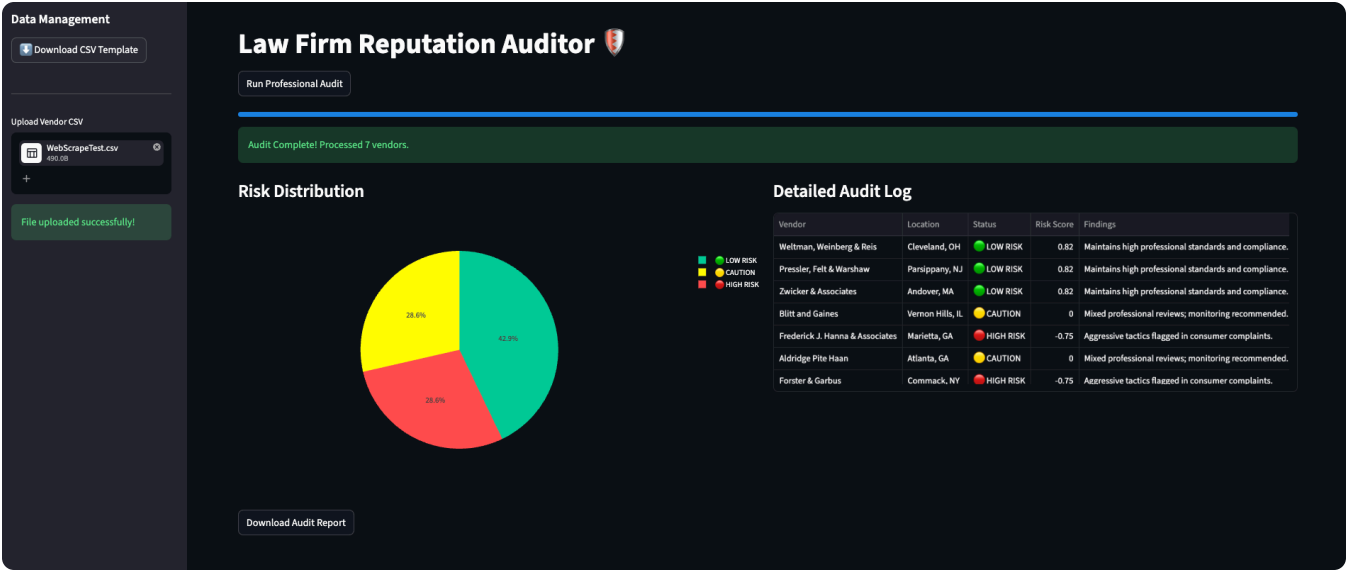

- Click the "Professional Audit" button to generate results.

Future Roadmap

- **V2.0:** Integration with internal Bank Vendor Management (VMS) databases.
- **V2.1:** Automated email alerts for sudden shifts in vendor risk scores.
- **V2.2:** Historical trend mapping to track reputation improvement/decline over time.
